

BI4DYNAMICS AX 6.0.3 RELEASE NOTES

New framework features

- Editable SSIS process flow.
- Customization and development Wizard for AX.
 - Automatically generate SQL code for facts, cubes, and dimensions based on metadata (AX AOT) through a simple 5 step process.
 - Add custom SQL code into existing generated code by using placeholders (new!) and still use data warehouse automation.
- Added support for Virtual Company.

New content

- Added dimension Unit of Measure to Sales and Purchase cube with referring transactional measures.
- Added 30 ACY measures across all modules.
- Added or redesigned 63 measures and Unit of Measure dimension; Measures in delivery fact are now calculated as weighed measures.

Improvements

- Receivables and Payables State fact data compression per selected period on Monthly or Weekly bases that enables much faster DW and cube processing.
- Inventory Dimension loads much faster.

Renamed

Renaming of dimensions, facts and measures from Sales and Purchase "**Line**" (OLD) to "**Order**" (NEW). Renaming better reflect Microsoft Dynamics AX naming's.

Reports

- Updated Excel and Power BI reports.
- Added set of Excel reports in ACY based measures
